

PALADIN – Barrel Lock and Key System

Description

All traditional barrel locks in use by electric, gas and water utilities today all have the same issues; water, dirt and bug infestation infiltrates the barrel lock mechanism making it difficult or impossible to unlock. In addition, key breakage is common since these contaminants prevent the key from seating properly in the lock.

Key breakage and lock malfunctions are now a thing of the past. Available from the Highfield Mfg. Co. is the Paladin Barrel Lock and Key system which incorporates a ground-breaking design that eliminates the inherent issues that exist today with traditional barrel locks. The face of the barrel lock is solid and sealed; therefore, dirt, sand, and water cannot enter the lock mechanism. Inserting of foreign objects into the lock mechanism by disgruntled consumers or vandals is a thing of the past. Complementing our unique barrel lock is a new concept in key design. A robust and rugged ergonomic design of the key tool eliminates key breakage that is common with current lever style keys.

Typical Installations

Benefits/Advantages

No Keyway Opening in Barrel Lock

- ◆ Prevents Water or Dirt Contamination
- ◆ Prevents Mud Dauber Insect Infestation
- ◆ Prevents Objects from Being Inserted
- ◆ Eliminates Key Breakage Issues
- ◆ All Stainless Steel Components Prevents Rust

Ergonomic Key Tool

- ◆ Rugged Design Stands up to Frequent Use
- ◆ Robust Key Mechanism
- ◆ Plated for Rust Prevention
- ◆ Simple Ease of Operation
