

Front Entry Ring Removal Kit

Description

The Front Entry Ring Removal Kit has been designed to provide utility personnel with a reusable tool for quick and efficient removal of Highfield front entry meter rings from field meter installations. This tool will not operate on the Armor Ring™ series or other competitive front entry rings.

The unique design of the Front Entry Removal Kit allows it to be easily assembled and mounted to all styles of Highfield front entry rings, even on gang meter installations, where space between meter centers may be at a minimum. The hardened ram screw assembly assures long field life for many reusable applications. Should the ram screw become worn or dull after extended use, the ram screw assembly may be removed and replaced.

Each kit is furnished complete with mounting frame and ram screw, threaded handle, and universal ratchet drive, packaged in a convenient carrying case. All kits are serial numbered to provide each utility with a method of internal control, as well as a means of maintaining the integrity of the locking system.

Part Numbers	Descriptions
93389025	F. E. Ring Removal Kit (includes mounting frame and ram screw, threaded handle, and universal ratchet drive)
93389026	Replacement ram screw assembly only
93389027	Universal ratchet drive only
